13B. Exhibit B:

Annual. No special characteristics of seed, seedling or fruiting stage (that is, seed head), just typical of *Tagetes patula*. Leaves dark green pinnatisect, segments linear lanceolate toothed. Flowers fully double with petaloid centers, about 1 7/16" diameter. Similar in color and flower type to Redcoat but flowers of Red Pygmy are slightly smaller than flowers of Redcoat. Plants of Red Pygmy are dwarfer and much less spreading and mature foliage tends to be much smaller than foliage of Redcoat. Most closely resembles Redcoat.

MARIGOLD EXTRA DWARF DOUBLE FRENCH RED PYGMY13D Exhibit D:

Came completely true in our California trials in 1972 (not trialled in Pennsylvania in 1972) and in our California and Pennsylvania trials in 1973, 1974 and 1975 and in All-America trials in 1974.

Most closely resembles Redcoat, a Burpee variety on which we applied for Plant Variety Protection on Feb. 9th, 1971, and out of which it was selected. In early growth stages Red Pygmy and Redcoat look somewhat similar, but as they become more mature the two varieties are quite distinct. At maturity the most obvious differences are in plant height, plant spread and foliage size - the foliage of Red Pygmy generally being very noticeably smaller than the foliage of Redcoat. Red Pygmy has a much tighter growth habit than Redcoat and in habit and flower size most closely matches the Pygmy and Petite types.
